

St. Nazaire-Brevins Bridge – France

Bridge Access

Customer

Sky Access

Project Scope

Provide access for bridge repair and maintenance

Challenges

- Different dimensions and angles on stay cables
- Access to narrow spaces in between the two unparallel stay cables was required
- Debris from sandblasting needed to be collected so it did not fall to traffic below

Power Climber Solution

Power Climber designed a custom access solution. A completely enclosed access platform with plexi and rubber enclosures, two hoses, and two built-in sand collectors was designed to capture the sand debris. The platform was powered by the Astro E89 hoist.
